ELSEVIER

Comput. Methods Appl. Mech. Engrg. 115 (1994) 391–393

Computer methods in applied mechanics and engineering

Subject index of Volume 115

Cavitation flows
Comparison between finite volume and finite element methods for an elliptic system arising in electrochemical engineering, J.-M. Fiard and R. Herbin 315–338

Coupled problems
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232

Design of programs
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232

Dynamics
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
Derivation of an evolution model for nonlinearly elastic beams by asymptotic expansion methods, L. Alvarez-Vazquez and J.M. Viaño 53– 66
A finite plate element for dynamic analysis of a cracked plate, M. Krawczuk and W.M. Ostachowicz 67– 78
Modelling of hydrodynamics, heat and mass transfer processes on the basis of unsteady Navier–Stokes equations. Applications to the material sciences at earth and under microgravity, V.I. Poleshaev 79– 92
Modal characteristics of rotors using a conical shaft finite element, M.A. Mohiuddin and Y.A. Khulief 125–144
How to render second order accurate time-stepping algorithms fourth order accurate while retaining the stability and conservation properties, N. Tarnow and J.C. Simo 233–252
An object-oriented approach for an effective formulation of multibody dynamics, A. Kecskeméthy and M. Hiller 287–314

Elasticity
Asymptotic justification of an evolution linear thermoelastic model for rods, L. Alvarez-Vazquez and J.M. Viaño 93–109
Intrinsic solution to the n-dimensional tensor equation $\Sigma_{r=1}^{m} \boldsymbol{U}^{m-r}\boldsymbol{X}\boldsymbol{U}^{r-1} = \boldsymbol{C}$, Guo Zhong-heng, Li Jian-bo, Xiao Heng and Chen Yu-ming 359–364

Finite element and matrix methods
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
A finite plate element for dynamic analysis of a cracked plate, M. Krawczuk and W.M. Ostachowicz 67– 78
Modal characteristics of rotors using a conical shaft finite element, M.A. Mohiuddin and Y.A. Khulief 125–144
Necessary conditions to avoid numerical locking in singular perturbations. Application to arch equations, D. Chenais and M. Zerner 145–163

Stabilized finite element methods for steady advection–diffusion with production, I. Harari and T.J.R. Hughes 165–191
Surface adhesive joint description with coupled elastic-plastic damage behaviour and numerical applications, U. Edlund 253–276
Projection schemes for one-point quadrature shell elements, T. Belytschko and I. Leviathan 277–286
Comparison between finite volume and finite element methods for an elliptic system arising in electrochemical engineering, J.-M. Fiard and R. Herbin 315–338
A *p*-extension of the symmetric boundary element method, S.M. Holzer 339–357
Optimal convergence properties of the FETI domain decomposition method, C. Farhat, J. Mandel and F.X. Roux 365–386

Fluid mechanics
Stabilized finite element methods for steady advection–diffusion with production, I. Harari and T.J.R. Hughes 165–191

Fracture mechanics
A finite plate element for dynamic analysis of a cracked plate, M. Krawczuk and W.M. Ostachowicz 67– 78
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232

Heat and diffusion
Modelling of hydrodynamics, heat and mass transfer processes on the basis of unsteady Navier–Stokes equations. Applications to the material sciences at earth and under microgravity, V.I. Poleshaev 79– 92

Miscellaneous topics
Intrinsic solution to the *n*-dimensional tensor equation $\Sigma_{r=1}^{m} \boldsymbol{U}^{m-r}\boldsymbol{X}\boldsymbol{U}^{r-1} = \boldsymbol{C}$, Guo Zhong-heng, Li Jian-bo, Xiao Heng and Chen Yu-ming 359–364

Modern computer architecture
Optimal convergence properties of the FETI domain decomposition method, C. Farhat, J. Mandel and F.X. Roux 365–386

Nonlinear mechanics
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232
Surface adhesive joint description with coupled elastic-plastic damage behaviour and numerical applications, U. Edlund 253–276
Projection schemes for one-point quadrature shell elements, T. Belytschko and I. Leviathan 277–286

Numerical solution procedures
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232
How to render second order accurate time-stepping algorithms fourth order accurate while retaining the stability and conservation properties, N. Tarnow and J.C. Simo 233–252
Comparison between finite volume and finite element methods for an elliptic system arising in electrochemical engineering, J.-M. Fiard and R. Herbin 315–338
A *p*-extension of the symmetric boundary element method, S.M. Holzer 339–357
Optimal convergence properties of the FETI domain decomposition method, C. Farhat, J. Mandel and F.X. Roux 365–386

Optimization
Optimal rectangular plate and shallow shell topologies using thickness distribution or homogenization, L.H. Tenek and I. Hagiwara 111–124

Plasticity
Surface adhesive joint description with coupled elastic-plastic damage behaviour and numerical applications, U. Edlund 253–276
Intrinsic solution to the n-dimensional tensor equation $\Sigma_{r=1}^{m} \boldsymbol{U}^{m-r}\boldsymbol{X}\boldsymbol{U}^{r-1} = \boldsymbol{C}$, Guo Zhong-heng, Li Jian-bo, Xiao Heng and Chen Yu-ming 359–364

Shells and plates
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
A finite plate element for dynamic analysis of a cracked plate, M. Krawczuk and W.M. Ostachowicz 67– 78
Optimal rectangular plate and shallow shell topologies using thickness distribution or homogenization, L.H. Tenek and I. Hagiwara 111–124
Projection schemes for one-point quadrature shell elements, T. Belytschko and I. Leviathan 277–286

Solution of differential equations
Derivation of an evolution model for nonlinearly elastic beams by asymptotic expansion methods, L. Alvarez-Vazquez and J.M. Viaño 53– 66

Solutions of ordinary and partial differential equations
Stabilized finite element methods for steady advection–diffusion with production, I. Harari and T.J.R. Hughes 165–191
An object-oriented approach for an effective formulation of multibody dynamics, A. Kecskeméthy and M. Hiller 287–314
How to render second order accurate time-stepping algorithms fourth order accurate while retaining the stability and conservation properties, N. Tarnow and J.C. Simo 233–252

Structural mechanics
Nonlinear free vibrations of composite plates, J. Argyris, L. Tenek and L. Olofsson 1– 51
Asymptotic justification of an evolution linear thermoelastic model for rods, L. Alvarez-Vazquez and J.M. Viaño 93–109
Necessary conditions to avoid numerical locking in singular perturbations. Application to arch equations, D. Chenais and M. Zerner 145–163
Damage 90: a post processor for crack initiation, J. Lemaitre and I. Doghri 197–232
How to render second order accurate time-stepping algorithms fourth order accurate while retaining the stability and conservation properties, N. Tarnow and J.C. Simo 233–252

Thermal effects and thermodynamics
Asymptotic justification of an evolution linear thermoelastic model for rods, L. Alvarez-Vazquez and J.M. Viaño 93–109

Transport phenomena
Stabilized finite element methods for steady advection–diffusion with production, I. Harari and T.J.R. Hughes 165–191
